

## PRESS RELEASE

Breakthrough: Vredo introduces the world's first amphibious self-propelled vehicle

Dodewaard – Vredo is the very first company in the world to enter the market with an amphibious self-propelled vehicle. The leading manufacturer of agricultural and turfcare machinery has been working on the innovation for over 3 years. "The Vredo VT Aqua 3.0 is a hybrid all-rounder. Over the past few weeks, the vehicle has undergone extensive testing at our location, and the results are promising," says marketing manager Erik Willems enthusiastically. The prototype will be ceremoniously launched in Dodewaard on Tuesday, April 2nd.

Willems describes the development of the Vredo VT Aqua 3.0 as a logical step. "The effects of climate change are becoming more frequent and rapid worldwide. The agricultural sector is also feeling the consequences significantly. Just consider the extreme amounts of rainfall. The way we fertilize and farm has to change. If we want to have an answer to the rising sea level in the future, waiting is not an option."

Unique diesel-electric propulsion

"Our technology has been considered progressive both domestically and internationally for years. We are an innovative company that likes to be at the forefront," continues Willems. "The development of an amphibious vehicle showcases what our employees are capable of. The Vredo VT Aqua 3.0 is extremely water-permeable and features a unique diesel-electric propulsion system. It's a remarkable feat of engineering and unparalleled craftsmanship!"

Seagrass overseeding

"The prototype is a first step. We will continue to innovate," emphasizes Willems. "The advantages are numerous. Currently, we are exploring possibilities for fertilizing seaweed. Overseeding seagrass is also a serious scenario. If there's room for innovation, we're on board. Especially where we can make a difference for our farmers and contractors, we won't shy away from a challenge," concludes Willems.

Interested in seeing the Vredo VT Aqua 3.0 live? Visitors are warmly welcome in Dodewaard on Tuesday, April 2nd. Please announce your visit via EMAIL.
